OUTSTANDING BLUETOOTH® TRANSMITTER / RECEIVER BTR EVOLUTION 5.1

Our BTR Evolution 5.1 gives the Bluetooth standard 5.1 completely new possibilities. Connect your home entertainment hardware in transmitter mode (optical with Toslink cable or analog via stereo RCA) and send pure sound wirelessly with the BTR Evolution 5.1 to up to two independent devices, such as speakers or Bluetooth headphones. As a 2-in-1 adapter, it can transmit as well as receive - both with the Bluetooth® 5.1 standard and backwards compatible. Switching between transmit and receive mode is possible with a simple toggle switch.

In receiver mode, they connect their device wirelessly (for example, a smartphone or a laptop) with the BTR Evolution 5.1 and output music and other sounds via jack / RCA or Toslink cable through their home entertainment hardware. Couple the Oehlbach BTR Evolution 5.1 with two devices and enjoy them with aptX HD double CD quality. The transmission is also improved by a high-quality Qualcomm chip, which is installed in the BTR Evolution 5.1. Through the low-latency function and a delay of less than 40 milliseconds they notice nothing of the wireless transmission and can enjoy music and other sounds to the fullest simply.

It sounds good and also looks good with noble, high-quality design in two colors in every home.
